Muscle building through magnetic field therapy

Thousands of muscle contractions through electromagnetic pulses

The High Energy Inductive Treatment with *Z Tone* is performed using electromagnetic pulses and is able to contract the muscles.

Electromagnetic fields can penetrate cells, tissues, organs and bones without deformation or loss, activate the electrochemistry of tissues and improve the function of cells and cell membranes. The magnetic field consequently stimulates nerve cells, muscles and blood vessels.

Meet the next generation of Body Toning

Z Tone enables the user to select one of 3 desired training levels for each region appropriately for the patient.

Z Tone has two applicators of the same size. Both applicators can be individually controlled and operated. This feature allows the user to treat two different regions with different intensities at the same time. The device also offers the option of connecting the applicators and operating them at the same intensity.

One step further

Performance and Design taken right to the edge

Z Tone has two applicators of the same size. Both applicators are used at the same time with identical application parameters or separately from each other.

All relevant treatment parameters can be set, saved and adjusted with a few clicks. *Z Tone* allows treatment with two different intensities at the same time. For example, the left and right biceps can be treated with different intensities without any problems.

The use of a single applicator is also possible.

Increased efficiency

Maximum flexibility

- Separate control of the applicators
- Two treatments at the same time

Maintenance-friendly

Time for the essentials

- Removable applicators make replacement easy

Ergonomic, stylish, high-performance

Designed for modern practice

- Large display with intuitive software interface
- Individual protocols adapted to the muscle region
- Wrap-around handle for maximum mobility
- Practical applicator holder always close to the treatment area

Combined in a very big way

The perfect combination for satisfied customers

Muscle development and support in fat reduction

Skin tightening and body toning are becoming increasingly important in modern practice.

Z Tone can be ideally combined with the *Z Wave Pro* treatment. After the *Z Tone* treatment give the muscles enough time to regenerate before starting the *Z Wave Pro* treatment.

Combination with *Z Lipo* is also very popular. Here it is recommended to leave an interval of min. 2 weeks between a *Z Lipo* and a *Z Tone* treatment.

Following treatment with *Z Tone*, it is possible to significantly improve skin firmness, skin elasticity and new collagen formation with the *Z Wave Pro* radial shock wave device.

Z Tone – safe, simple and fast

The treatment is performed with the patient lying down and is extremely comfortable for him or her. A session generally lasts between 20 and 30 minutes. As a result of the non-invasive and virtually painless treatment, the patient can resume his or her normal daily activities immediately after the treatment.

One possible combination is, for example, the Z Tone application following the ZLipo treatment (Cryolipolysis™). This combination stimulates the muscles after fat loss.
